

Module 2 | Networkwalks tools

Student	Mwansa Jonathan Musenge
Module	W3-PM2 - browser workflow
Target SHA-256	f569ce5208a64b0f73f5a98f2187eafcd8282641fb27afa0c1a30d83b67ef06c
Recovered password	password1

Objective and method

Scope. Recover the password of **samples/module-2-attached-PDF1.pdf** using the Networkwalks Hash Calculator and Password Cracker in a Windows browser. This sample is different from the similarly named PDF inside the course pack.

1. The Hash Calculator PDF tab identified an encrypted file and displayed a PDF attack record beginning with \$pdf\$. The record was pasted into the Password Cracker.
2. The built-in 100-password list was selected. Screenshots record progress at 49 and 91 candidates. The interface then displayed **MATCH password1** and "PASSWORD CRACKED SUCCESSFULLY."
3. The supplied opened-document screenshot shows the first captured flag. The attached PDF was also opened with **password1** during report verification and its embedded flag text extracted.

Finding and recommendations

F-02 - Password found in a small candidate list. The built-in dictionary recovered this sample's password within 100 displayed attempts. Use a long, unique password and convey it through a different channel from the protected file.

Evidence limitations

The attack record and browser outcome are visible in screenshots; no exported browser log was supplied. The browser rate is an interface observation, not a benchmark. A statement on the website about local parsing is not independently verified by the screenshots.

Screenshots supplied by the student; filenames and checksums are indexed in the repository.

E09 | Browser tool displays MATCH password1.

Congratulations!

You have captured your 1st flag.

Let's continue this amazing journey of Cyber Security with incredible team of instructors at Networkwalks Academy.

Your Flag1 is: `nw{networkwalks_flag1_jtr_270521_1}`

E10 | Opened PDF shows the first captured flag.
